

It's more than code

KARGO

Who we are

John Butler

Principal Software Engineer

BSC Multimedia Applications
Graduated SETU 2004

Wei Kit Wong

Software Engineer II

BSC Applied Computing
Graduated SETU 2020

What we do

FOR PUBLISHERS

Kargo is helping publishers and streamers drive more yield from their properties. We create ad experiences that serve your audience and respect your brand.

FOR ADVERTISERS

Premium, brand-safe **supply** at scale. Bespoke **creative** formats for all screens. Cookie-less **audience** targeting. Kargo brings them together like no other to over deliver on your goals across web, CTV and social.

FOR YOU

We have a ton of interesting problems to work on!

Publishers

CTV

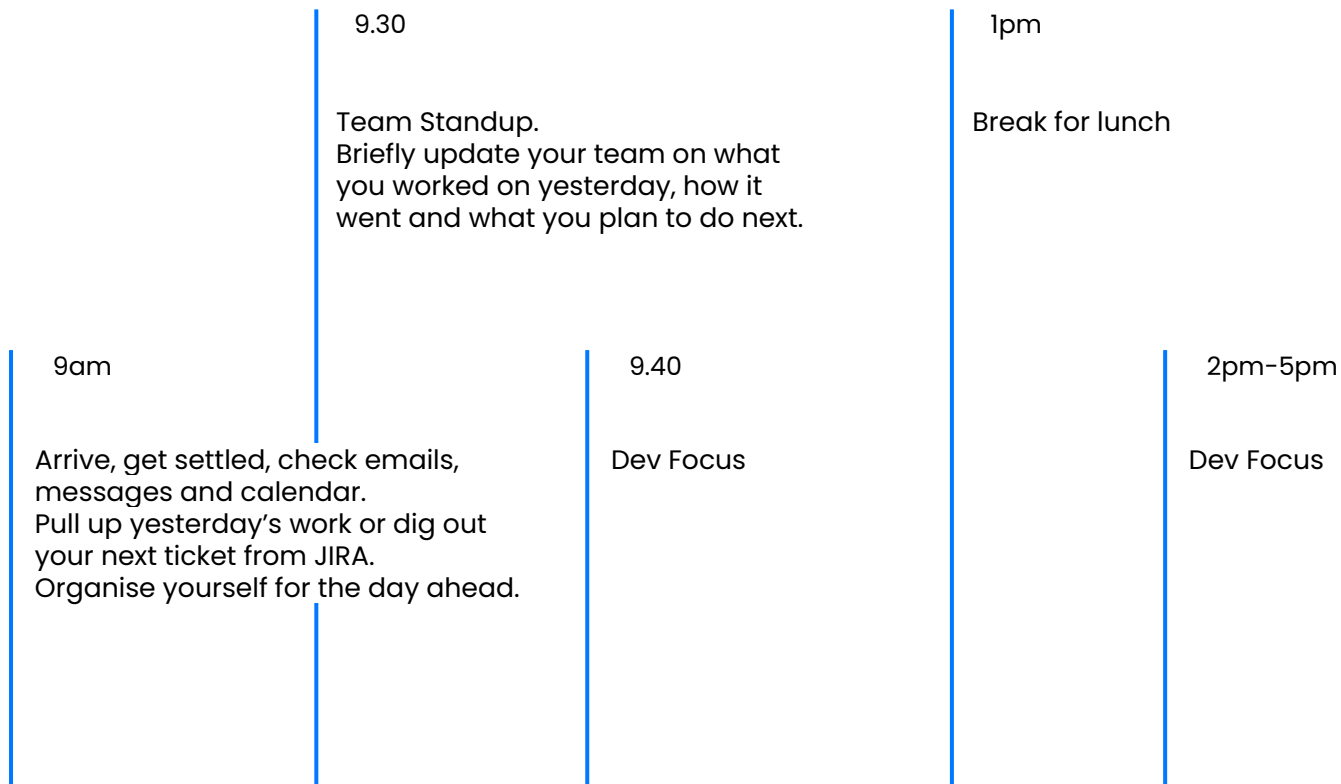

Social

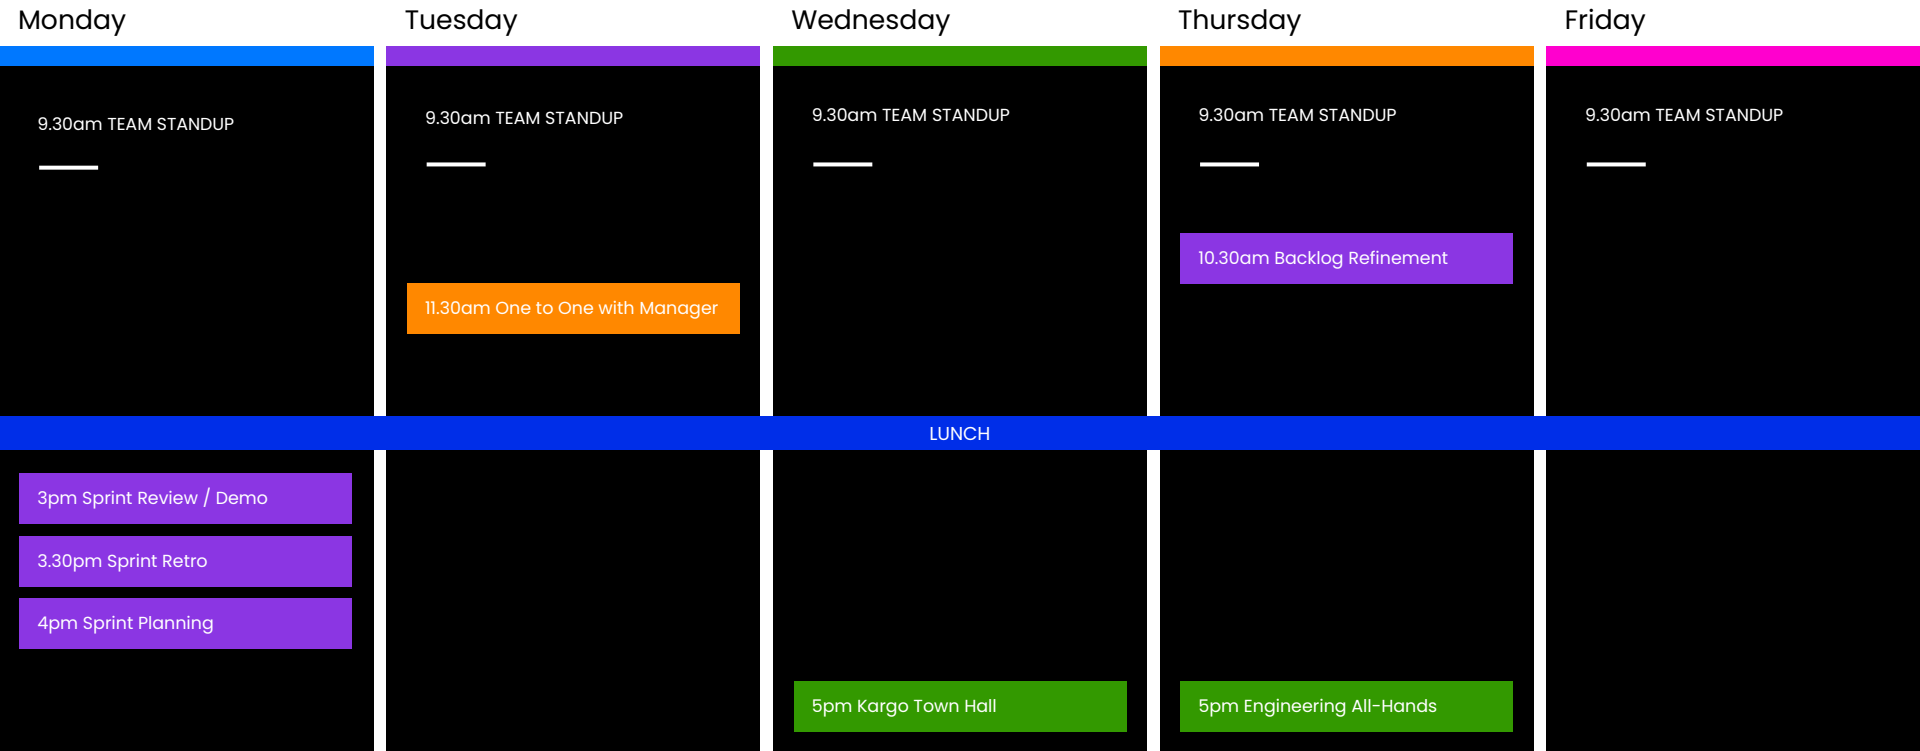

Agenda

- + A Day in Kargo
- + Habits for every day

A typical day...

There will be some meetings

The best engineer
is not always
the best coder.

- John Butler
just now

Soft-skills are the foundation

COLLABORATE

You are part of a team.

We are organised this way so we can help each other.

Reach out.

EMPATHISE

At the end of every task there is a person.

If you listen to them and try to understand their position, you can help them.

REASON

Think critically during planning sessions and make thoughtful contributions.

Ask questions. There are no silly questions.

ADAPT

Requirements change, goal posts move.

New perspectives and priorities can also bring change.

Be open to it.

PRESENT

Present your work and ideas. Even if incomplete.

This shifts your perspective, promotes collaboration and feedback.

Soft-skills are the foundation ..really!

PREPARE

Look ahead to meetings you have coming up and prepare for them.

Check the agenda or ask for one.

Pre-read docs.

FOCUS

It's easy to focus on tasks that you enjoy.

Sometimes tasks are less enjoyable and you need to really practice discipline.

INTROSPECT

Retro's are a time for the team to examine how things went and what could improve.

Don't forget to look inward for ways to improve.

RECOGNISE

See the things your colleagues do well.

Recognise it, call it out.

We learn from and make each other better.

CELEBRATE

Introspection is good for growth but sometimes we only see our mistakes.

Remember to recognise and celebrate the good work you have done.

Be a lifelong learner

LANGUAGES

Master one that you like.

Why does it exist and what problems does it solve.

What are the trade-offs.

FRAMEWORKS

See, Languages.

Understand what is a language feature and what is a framework feature.

TRAIN

Take your brain to the gym.

Get exposure to as many problems as possible. Fix them.

*Tutorials and AI can hurt your training.

BE CURIOUS

Never stop asking "why?"

Why does that work that way?

Why did that fix this problem?

What if I do this?
