

Preparing and navigating
Technical Interviews with

KARGO

Who we are

Wei Kit Wong

Software Engineer II

BSC Applied Computing
Graduated SETU 2020

John Butler

Principal Software Engineer

BSC Multimedia Applications
Graduated SETU 2004

Agenda

- + How Technical Interviews differ in the industry
- + Guidelines to prepare for Technical Interviews

Interviews differ

By role

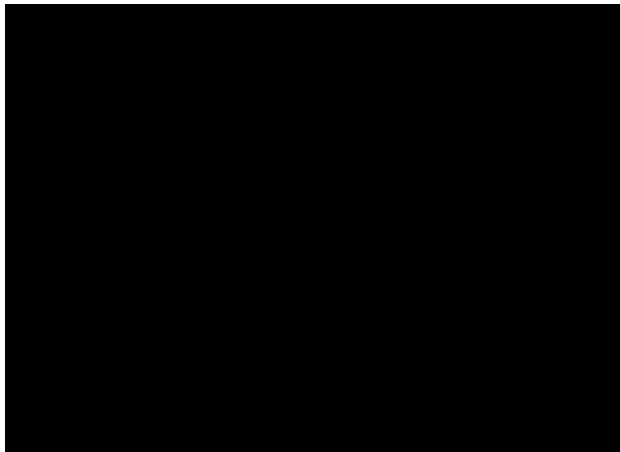

More focus in experience for senior positions

By company

Different companies have different skill set requirements e.g. Languages & frameworks

By geolocation

The more competitive the market is, the higher the floor is for interview performance

Technical Interviews differences

01

Number of technical interviews

The more senior or the more competitive market, the more interviews

02

Technical skill sets evaluated

Ranging from "Can you code" to "Can you optimize this workflow while taking different edge cases into account"

03

Type of technical challenge

Ranging from questions about frameworks to solving a coding problem in real-time

Ok that sucks. How do I
prepare for one?

What I Look For

Prior
Experience

Build
projects,
build
confidence.

Have something
to show off and
talk about.

More projects
means more
practice, and will
give confidence
in your technical
ability.

Technical
Ability

Is architecting,
not only
coding.

Can you scope
an alternative
solution? Account
for edge cases?

Coding is the
easy part in
industry. Figuring
out what to code
is hard.

Communication

Ask
questions.

Resolve
confusions and
problems faster
by asking.

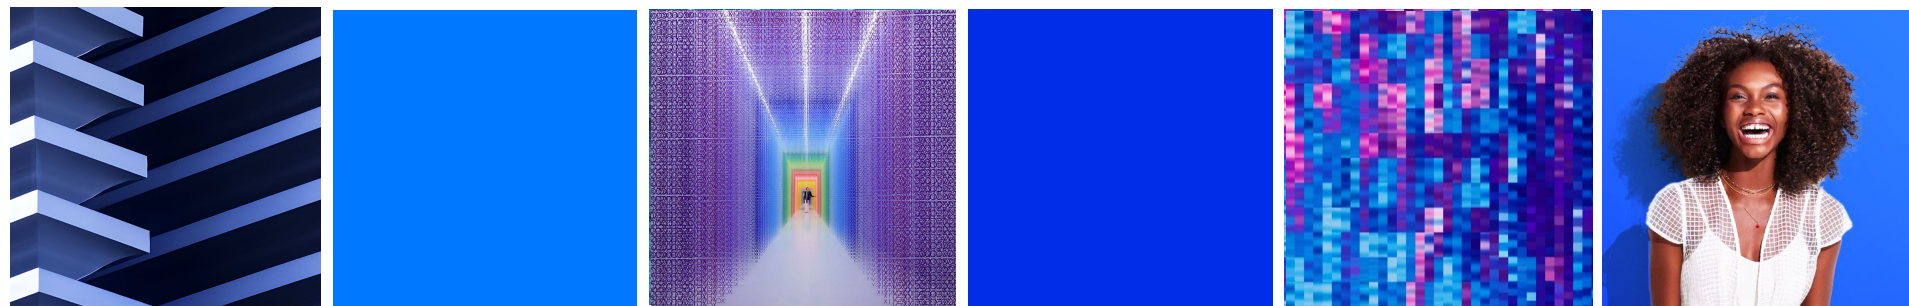

Readiness to
collaborate is
crucial to function
in a team.

Passion

Be open.

Fake it till you
make it.

Willingness to
learn is how you
survive in a
constantly
evolving industry.
